

Rotary Club of Belleville – Service Above Self

Thank you, Belleville Rotarian and Past President Kristin Crowe and her team at Alarm Systems for stepping up to make things better during the pandemic.

As an essential service, they live and breathe the daily worry of keeping all of their employees safe and healthy during the COVID-19 pandemic, Kristin and her team have worked together with partners in their industry to bring valuable solutions to our Communities. These offerings could minimize health risks in our work environment(s), today and in the future.

They have participated in the QHBA parade and fundraiser for frontline workers, are promoting the support of small locally owned

businesses, are actually supporting small locally owned businesses and connecting people with the support they are seeking to help them make it through this crazy pandemic.

Elevated Body Temperature Detection: Hikvision thermal cameras are ideal for locations that have multiple people entering with no form of electronic access control. Examples are hospitals, medical offices, grocery stores, educational facilities, shopping centres and big box stores.

These cameras have high temperature accuracy that can help detect elevated body temperatures which may indicate the presence of a fever and would trigger the need for additional screening BEFORE that person entered your facility.

Contactless Entry & Elevated Body Temperature Detection: WatchNet readers are ideal for facilities that already have electronic access control on their entrance. Examples are food processing plants, manufacturing facilities, or any

essential business that needs to remain functional. This is a 3D facial recognition reader with skin temperature sensor. This device can automatically deny entry if someone has an elevated temperature reading.

In addition to the above, their traditional PERS, **Personal Emergency Response System** is a product suited for those looking to remain independent in their own home. This product is in demand now more than ever for people living on their own, particularly the elderly and at-risk individuals as the pandemic has created even further isolation. This device connects the customer to potentially life-saving assistance with the press of a button.
