

Bath Springs Hand & Surface Sanitizer

Bath Springs Hand & Surface Sanitizer is formulated to meet World Health Organization (WHO) standards for effective sanitization and elimination of viruses, specifically the COVID 19 Virus. The active disinfecting ingredient is denatured ethanol / ethyl alcohol at 80% concentration by weight. Other ingredients are hydrogen peroxide, glycerine and purified water.

The product not a gel. It is a clear colourless liquid. The addition of glycerine reduces the stickiness of the product as a humectant – it is not meant to thicken or gel the product. The WHO specifically recommends against the addition of fragrances, gelling agents and other ingredients as they may reduce the anti-microbial effectiveness.

See link below to WHO information on recommended hand sanitizer formulations. For SDS please visit www.bathsprings.com
