

To care for your Peaches & Pears

To care for your premium peaches when you get them home, place the peaches that are ripe and the ones you want to ripen right away on the counter out of direct sunlight. It may take 1 or 2 days to become soft to the touch. The peaches you are not ready to eat, refrigerate and pull them out when you are ready for them to ripen. Please do not leave your whole case on the counter, unless you want them to ripen at one time. They like to stay COOL! The same method applies to your pears! RECIPES are available on our website: www.rotaryclubhr.org/sitepage/recipes
