What Exactly Is Polio?

Polio is:

- A crippling and potentially fatal infectious disease, polio (poliomyelitis) still strikes children mainly under the age of five in countries in Asia and Africa.
- Polio can cause paralysis and sometimes death. Because there is no cure for polio, the best protection is prevention. For as little as \$0.60 worth of vaccine, a child can be protected against this crippling disease for life.
- It can cause paralysis within hours, and polio paralysis is almost always irreversible.
- In the most severe cases, polio attacks the motor neurons of the brain stem, causing breathing difficulty or even death.
- Historically, polio has been the world's greatest cause of disability.

Robert Scott, International PolioPlus Committee chair, speaks at the PolioPlus breakout session, Rotary International Convention, Lisbon, Portugal.

If polio isn't eradicated, the world will continue to live under the threat of the disease. More than 10 million children will be paralyzed in the next 40 years if the world fails to capitalize on its \$9 billion global investment in eradication.

ROLL ROTARY

Roll Rotary, Roll along, Roll along
Roll Rotary, Roll along, Roll along
Marching onward, upward ever
Till at last we reach the heights above.

Roll Rotary, Roll along, Roll along
Roll Rotary, Roll along, Roll along
Till all people of the world are one in Rotary.
