

Help us to help locals in Nairobi, Kenya build a sustainable Rainwater Harvesting System

DID YOU KNOW...

- Nearly half of all borehole wells in Africa are abandoned within 12 months of installation?
- When there's no water at home, women and children are forced to walk 20 km distances just to collect poor quality water?

The problem in rural Africa is not a lack of water, but a lack of *water management*.

The solution?

The installation of large capacity rain-water collection and storage systems that is simple, sustainable, and affordable using local resources.
