*Philippa Stasiuk—Direct Primary Care—Program arranged by Dick Cumming*

Program Wednesday, July 19, 2017

*Mark Caniglia—Lauren Bliss—Dirk Neild—Rob Everett—Allo Communications.*

Program arranged by Paul Horton

Dirk Neild

Mark Caniglia

ALLO's growth and success over the past decade are thanks in large part to our reputation for winning customer service, technical capabilities, experienced, knowledgeable personnel, and superior products. Since 2003, ALLO has provided customers with the most modern network possible while employing a team of engineers, operators, and technical experts who constantly work with customers to develop creative ways to utilize ALLO's fiber network. Allo Communications is a Nebraska-based and Nebraska-owned telecommunications company offering fiber telephone, long distance, broadband, internet and television to residents and businesses. ALLO currently provides communications services to over seven cities with more than 335,000 people.

ALLO has developed a world-class network to expand business opportunities, create jobs, and improve quality of life. We at ALLO take great pride in providing residents and businesses with unmatched entertainment and communications options.

Brad Moline, who serves as ALLO's president, held several senior positions with organizations across the U.S. before returning home to Nebraska with his wife to raise their family. Among those positions, Moline was the senior vice president of finance, chief financial officer and a driving force behind the exponential growth of Birch Telecom, Inc. in Kansas City. Moline also took a large national transportation company public and was retained as a valued member of their board. He holds a degree in business administration, with distinction, from the University of Nebraska. Founded and headquartered in Lincoln, Nebraska, Nelnet is a diversified technology and educational solutions company. Nelnet began its life focused on helping students and families plan, prepare, and pay for their education. Since then, Nelnet has evolved to include making administrative and financial processes more efficient for schools and financial organizations. The acquisition of ALLO further solidifies Nelnet's position as a growing business that shares a commitment to an exceptional customer experience with great service and best-in-class technology.

**Meetings at Valentino's - 70th & Van Dorn**  
**Noon Luncheon starting @ 11:45 a.m.**

**July 19, 2017**

The fiber optic core is made of glass which allows data to flow in its natural form, light. The beauty of nature is that when left alone, it can exceed our expectations and amaze us with its efficiency. Data flows much faster and farther by light without the pesky interruptions copper cabling receives from electrical interference.

Have you run a speed test lately? Go ahead, give it a go, we'll wait. Now let us break it down. When information travels along copper cabling, it's forced to overcome greater resistance from electrical interference. This interference causes loss of signal, noise interruption, and disappointing speed test results. ALLO guarantees symmetrical speed so that your connection is

## WHAT TO EXPECT DURING CONSTRUCTION.

### Rob Everett—Bauer Underground—Installation contractor

We want you to be informed every step of the way. As our teams construct the fiber network in your neighborhood we'll be reaching out by mail, email, and even knocking on your door to keep you in the loop. The website map for your area (found on your city's "Locations" page) will always show the most up-to-date information on progress in your neighborhood. If you have any questions or concerns, please use the contact form below to get in touch.

The flags or marking in your area were placed by the local utilities companies and help our team identify where the lines are underground. When ALLO begins fiber construction, we use these markings to protect against damage to your property or utilities. Please see the list below for an explanation of utility color associations.

- ◆ White: proposed excavation.
- ◆ Pink: temporary survey markings.
- ◆ Red: electric power lines, cable, conduit, and lighting cables
- ◆ Yellow: gas, oil, steam, petroleum, or gaseous materials
- ◆ Orange: communication, alarm or signal lines, cables or conduit
- ◆ Blue: potable water
- ◆ Purple: reclaimed water, irrigation and slurry lines
- ◆ Green: sewer and drain lines

The city owns small but specific portions of your property to access and maintain city utilities. We work with the city to access these areas as we build our fiber network.

A utility easement allows a utility the right to use and access a specific area of your property for constructing, operating and maintaining gas, electric, water, and sewer lines. The easement is often a permanent restriction on the property so that it transfers ownership with the home or property when sold. Having an easement gives the utility the right to use the land, but the utility does not own it.

A "right-of-way" is the surface and space above and below any real property in the city in which the city has an interest as an owner or trustee for the public for public travel including public streets, highways, avenues, roads, alleys, easements, sidewalks, tunnels, viaducts, or bridges.

***A Rotary Thank You to the representatives from Allo Communications for a very informative presentation about The Fiber Future.***

**Rotary**  
District 5650  
**DISTRICT CONFERENCE**  
**AUGUST 11-12, 2017**

**THE POWER OF**  
**ONE** NEVER DOUBT

**PUBLIC SESSIONS Friday 7 PM to 9:30; Saturday 2 PM to 5 PM**

**BRING 1 PROSPECTIVE MEMBER FOR FREE!**

Friday night and Saturday afternoon, each club can bring 1 prospective member for free. BUT WAIT, there's more! For every 5 members that sign up for the full conference, you get 1 additional bonus. <sup>[1]</sup>
