

Covid cases and deaths were kept under control while everyone sheltered in place from late March to late May.

But now that people are “done” with covid, it is important to remember that covid is not done with us.

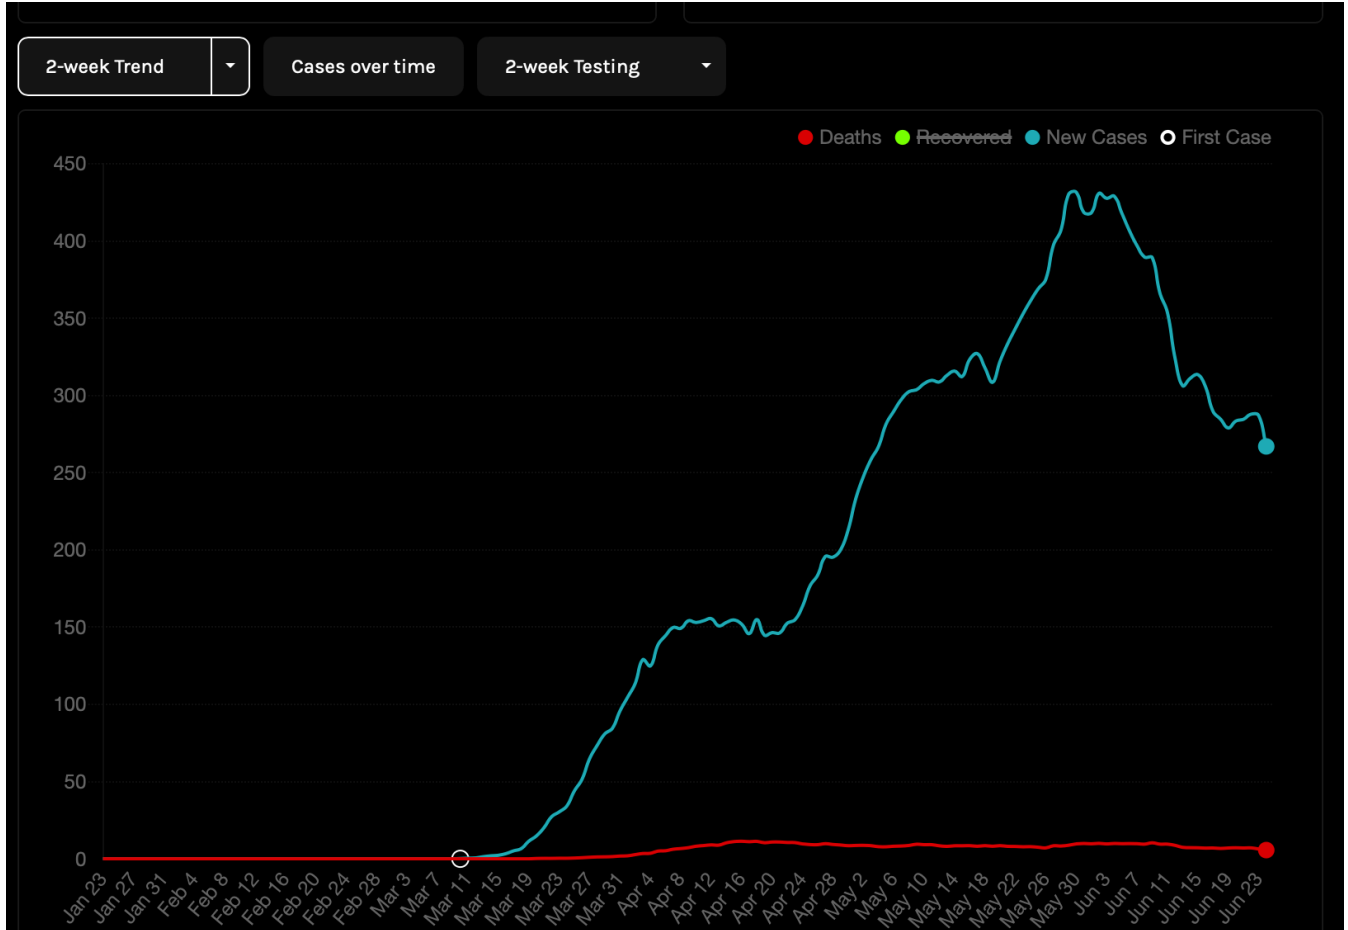

First a chart from [Statnews.com](https://www.statnews.com/feature/coronavirus/covid-19-tracker/) showing what is happening in Texas, which opened up too fast and too many Texans went out to eat and drink, attended large gatherings, etc.

Here is the state of Wisconsin

More below ...

But this is LaCrosse county, where a super spreader event and 20 to 30 year olds went out over Labor Day. This can happen anywhere.

This next chart shows why COVID should scare all of us. For example, in Wisconsin's 70 to 79 age group there have, 1346 total cases of whom 43% were hospitalized and of those 34% died. Alternatively, for people age 70 to 79 who became symptomatic with Covid 15% died. Yes, maybe another 20% of people are asymptomatic, but the mortality rate is still awful. This data is from <https://www.dhs.wisconsin.gov/covid-19/cases.htm>

| Age Group (Years) | Cases as of 6/23/2020 | Ever hospitalized as of 6/23/2020 | Any Intensive Care as of 6/23/2020 | Deaths as of 6/23/2020 |
|-------------------|-----------------------|-----------------------------------|------------------------------------|------------------------|
| <10 | 815 | 24 | 2 | 0 |
| 10-19 | 1,889 | 47 | 3 | 0 |
| 20-29 | 5,165 | 171 | 25 | 7 |
| 30-39 | 4,564 | 262 | 36 | 8 |
| 40-49 | 4,038 | 390 | 83 | 22 |
| 50-59 | 3,680 | 555 | 128 | 58 |
| 60-69 | 2,520 | 687 | 202 | 125 |
| 70-79 | 1,346 | 579 | 141 | 200 |
| 80-89 | 867 | 400 | 69 | 185 |
| 90+ | 447 | 153 | 27 | 145 |
| Total | 25,331 | 3,268 | 716 | 750 |
