

Our Mission: to find cost effective ways to improve healthcare in underserved parts of the world by using emerging technologies.

The Challenge: Tanzanians have limited access to vision care due to very limited numbers of eye doctors. In addition it is difficult for the mostly rural subsistence farmers to afford glasses or travel the long distances to reach an eye doctor.

How SKYGEN International Foundation is Making a Difference

The SKYGEN International Foundation has provided thousands of vision tests and prescription glasses to Tanzanians each month to those in need since July 2018. The Foundation works with a number of partners across the world and employs and trains a local team (including an optometrist and field workers) to organize screenings, perform vision tests and deliver eyeglasses every day using cutting-edge technology.

SUPPORT THE CAUSE

\$5

can buy a pair of glasses

\$500

can provide vision tests and glasses for a small school made up of 222 students

\$2,500

can help roughly 332 adults at a local hospital

\$10,000

can help 11 schools - that's over 4,400 students with a brighter future!
