

## Your Scholar's Correspondence

### 1st Semester 2022

**Name: Thorn Dany**

**Major: Nurse**

**Year II: Semester One**

Dear Allentown Rotary Club Foundation,

Greetings to you from **Ratha**, SC Scholarship Coordinator. On behalf of our scholars and everyone with Sustainable Cambodia, we are grateful for your wonderful support. Please enjoy reading your scholar's correspondence.

*Here are the names of all the courses I studied in my 1<sup>st</sup> Semester:*

**Dany:** The subjects that I learned in semester one are Fundamental Nursing, Methodology, English in Medicine, Human Pathology, Anatomy-Physiology, Nursing Foundation, Human Ethics, Law and Nursing Practice, Nutrition and Health, Communication and Pedagogy, Counseling in Health, Overview of Nursing Science, Fundamental Nursing Theory and Sociology.

*Would you like to know about my favorite subject this semester and something important in this subject for my future plans?*

**Dany:** My favorite subjects in the first semester are Anatomy-Physiology Physiology, Human Pathology, English in Medicine and law, and Nursing practice, and they are really important for future life plans. Also the study of the human body and the source of disease, such as care, laws, and ethics in the field of health.

*Now that I am a university student, these are special skills and abilities that I am discovering that I have:*

**Dany:** The skills and abilities that I have discovered, I am convinced that skills of the health sector need to be studied thoroughly in the class and practice in real life, as well as the knowledge and ethics to serve humanity as well as the world in the future.

*I would like to describe one specific experience to help you know more about my life now in University.*

**Dany:** I would like to share a practical experience with you that will help you to know more about my life at the university. At the university, there are professors who have trained me in this field, there are many students who have to study with me. I know that in this profession it is a bit tiring, but I enjoy this field. I practice in the laboratory. Nursing is a busy because there are a lot of things to do. I do it step by step and have to be careful.

*I would like to tell you about an unexpected happy experience that I had in my 1<sup>st</sup> semester.*

**Dany:** An unexpected happy experience I had in semester 1 is that I understand how to test blood pressure. My class allowed me to go to the lab to do some practice about testing blood and finding out some bacteria in our body whether it is good or bad. So I choose to do testing blood so I did a presentation and my lecturer praised me that I did well on this topic. So it was an unexpected happy experience I had.

*Here is one main challenge that I met in this semester and how I am solving it:*

**Dany:** This is the problem I encountered this semester, I encountered a few problems in my studies. It is a livelihood problem because my family is a farmer and I have four siblings who have to study all in school. So they try hard in earning money to support us. They're never complain and say tired. They are happy to see us in school. I don't have any solution but I will study hard to make them feel proud.

*Would you like to know activities that I enjoy doing to improve my knowledge in my free time?*

**Dany:** In my free time at school, I went to the library with friends to read books. I go to laboratory to do some research, I do assignment and watch some health care video on You Tube. Not only that, I always reviewed some lessons for the next semester exams.

***My special thanks to you, my sponsor.***

***I am a lucky student who get support from you to explore the world with knowledge, Thank you for your great helps!***

***My name Thorn Dany***
