BARAVAN CARAVANS

1954 – 1988

THE EARLY YEARS

The first Baravan Caravan was built in 1954 by David and Horace Barrett at Bridge Street in Riverton. This was the home of Horace and Vi Barrett, father and mother of David Barrett.

Horace being an Aeroplane Mechanic in WW2 and an all-round 'mister fix anything' sort of man actually built a caravan in 1947. No doubt he was the inspiration and means for David to build his first caravan.

Horrie and Vi Barrett with Phyllis and Syd Keirle

David after leaving school at 15 worked in the National Bank in Goomalling with the intention of becoming an accountant. After 3 years he left the bank to work on his uncle's farm in Dukin then to Jerramungup where he had a fencing contract for the War Service Settlement Scheme.

Probably the idea of caravan manufacturing for David came from meetings with his mother Vi whilst she was working for Syd Keirle who had a caravan business. The business was located in Victoria Park, Syd was the agent for Carapark Caravans which were manufactured in NSW (Australia's largest Caravan manufacturer at the time). David used to call in and see his mother from time to time and met Brenda who was the stepdaughter of Syd Keirle. As they say, one thing led to another and David and Brenda married.

Horrie's (Horace's) caravan – 1947

Prior to marrying he and a mate 'Kiwi' had been living in tents during the fencing contract however this was not really suitable for a newly married bride so David and his father built a caravan in 6 weeks for their accommodation. The caravan was 18 ft long, ply covered and painted.

A colour band was painted on later.

The first Baravan – 1954 – David and Brenda

The first Baravan with colour band

Brenda became pregnant that year and they returned to Perth and lived in David's parent's house in Riverton (now Wilson). On returning to Perth the decision was then made to make caravans for a living. Several more caravans were made at Riverton in 1955 before finding a suitable factory in Bentley.

It was a basic shed near Adrian Street that unfortunately flooded so David purchased a property, **129 Welshpool Road, Welshpool**. This was originally a duck farm owned by Mr and Mrs Myer. David's mother, Vi Barrett was the instigator of dealings with the Myer's and developed a friendship with them prior to suggesting selling the property to her son. A shed was built on it to make caravans which became the home of Baravan and the family lived next door in a rented house.

1955 Baravan built at Riverton

Interior 1955 Baravan

In 1956 business was so slow they nearly shut up shop when they couldn't pay any bills. In order to keep going a caravan was sold to Syd Keirle which enable them to pay their bills.

David had worked in the National Bank and looked for employment with the bank, unfortunately there was no married accommodation available so decided to give it one last shot and build some vans for display at the **1956 Perth Royale Show** which was the start of the business picking up again.

Vi Barrett, (Mother of David) told a story to Jenny Barrett (wife of Bruce) that when she was displaying and operating the '**Foldavan**' camper at the Royal Show in 1956 she remembered displaying and erecting it with several interested people when it fell on her head, this was not a good look, however 1 person still bought one. Needless to say there were probably some design issues and that product wasn't seen for long on the market.

Baravan Caravan display 1956 Perth Royal Show

'Foldavan' 1956 Perth Royal Show

1957 Baravan at Welshpool

By the late 50's the business was finally moving ahead however being a manufacturer and retailer of your own product had it's limitations as David found and needed to be either one or the other to grow.

With his father Horrie they built the first part of the factory and as business grew so did extensions to the factory.

The first extension were approved in June 1957, then extensions approved in May 1959, more extension approved in December 1961 and finally extensions in February 1963 to the property purchased next door at 127 Welshpool Road, Welshpool.

Properties at 125, 123 and 121 Welshpool Road were purchased in future years.

BARAVAN DOMESTIC CARAVAN PRODUCTION

During the 1960's **Baravan Productions** were Western Australia's largest Caravan Manufacturer. The alliance formed with Skipper Baileys in Victoria Park as Baravan's sole supplier of Domestic Caravans created an alliance which ensured the ongoing future for Baravan's through the 1960's.

1963 Baravan Caravan's Factory on Welshpool Road

In December 1963 **Skipper Bailey Motor Company Limited** took delivery of their first Baravan Caravan. This was chassis number 449 an 'All Metal Caravan', 13'2" in length and model LD (lounge dinette).

The business arrangement with 'Skippers' continued until June 1970. Retailing of Baravan Caravans then returned to Welshpool and sold through 'Caravan Centre of WA'.

The sales yard at Welshpool was alongside the Baravan factory and opposite Bitone Caravans.

Size of caravans ranged from 10' to 26' with each caravan being described by size (length) and layout.

Mid 1965 descriptions also included a Model.

For example:
11'4", Safari, D2S

INFORMATION BY YEAR OF PRODUCTION DESCRIPTIONS, SIZES AND CHANGES

Size: 11foot 4 inches long

Exterior: Vertical White 'log cabin' hand pressed Aluminium sheeting.
Regal 19', 22', 26'
Princess 15', 15' x 8' wide
Commercial production thereafter

Note: There is a variation in the chassis numbers when compared with actual production. The factory closed over the December – January period for annual leave and some chassis's did not follow numerically when the order was placed. Some vans were placed as a priority and produced forward of some other chassis numbers and so ended up being produced in a different calendar year.

Timber caravan framework was Tasmania Oak timber with radius and curves steam bent. Overlapping horizontal and vertical timbers were half checked overlaps and screwed at the joint.

Early chassis were steel A frames and front and rears and main chassis rails incorporating the use of Karri timber longitudinals. Angles welded across the main rails supported the timber.

In the years of manufacturer where Plasply and Flat aluminium sheeting were fitted to the exterior timber framework and special attention to ensure that all slotted screw heads were aligned in the same direction.

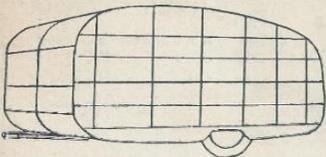

Interior paintwork consisted of the application of pink primer, undercoat and then an enamel top coat with the company supplying the paints being 'Spartan Paints'. In later years they also supplied automotive lacquer for the colour bands on the white acrylic coated aluminium sheeted caravans.

Silver Horizontal 'rolled single ribbed' Aluminium sheet prior to RS2 know by staff as RS1 – 1964 to 1965 built caravans.

HOME BUILDER KITS

A large part of Baravans business was producing Caravan Shells or Chassis's with Steel Framework being bought by those wanting to build and fit out their own caravan.

The customer was then able to save on the labour costs in buying a completed caravan but still having technical advice and shown how to go about the process by Baravan's.

All of parts, components and knowhow was at their disposal to draw on from Baravan's experienced staff to build a quality and robust caravan.

Records from chassis number 200 (year 1959) - 453 (December 1963) show a variety of home builder products described as:

- Ali Kit
- Ali Shell
- Bond Shell
- Plaspoly Shell
- Ply Shell

During this period around 60 were sold to Home Builders wanting to make their own caravans.

One such 'Home Builder' is 95 year old Mr. Bill Kennedy who bought a 13'2" 'Baravan Shell', chassis number 392 which came out of the factory 29.03.1963.

The quality of Bill's workmanship was excellent and the caravan remains in the family having celebrated it's 50th year in 2013 doing 210 trips and travelled 188,759 kilometres (Bill kept records of everything).

2017 - Bill Kennedy with his Baravan

The 2nd last home builder kit sold was chassis number 2403, a 15 x 8 shell delivered out of factory 24.02.1975, the last being 14 x 7, chassis number 2483 delivered out of factory 20.03.1976

COMMERCIAL CARAVANS

Many were built by Baravan, the first four being built for the Forestry Department in October 1960.

Early Commercial Caravan customers also included:

- Church of England - 1960
- Western Mining - 1962
- State Energy Commission - 1962
- Geophysical Survey - 1963
- P.M.G. - 1963
- Co-operative Bulk Handling - 1963

Above was built for a WA farmer for Domestic use chassis 261, 22' All Metal Commercial 1960/1961.

After **Skipper Baileys** became the Baravan's distributor there were a considerable number of 'Commercial - Work Vans' built and sold in 1964-65. This was due to the expanding Mining Industry and the addition of the Standard Gauge Railway being built across the Nullabor to join WA with the other states.

112 Commercial Caravans were built and sold in this period:

- July - August 1964 - 30 caravans
- December 1964 - 36 caravans (note: 2 built per day)
- March 1965 - 12 caravans
- July 1965 - 3 caravans
- August 1965 - 13 caravans
- November 1965 - 18 caravan

Above most likely to be Nos. 252, 253, 254, 255 built for Church of England Nov 1960

Blessing of caravans above in 1961 St Georges Terrace

April 1971 16' Commercial . No. 1957

Commercial Caravans W.A.G.R. Est. 1978

Commercial Caravan Manufacture continued with Government Departments and Mining Companies, Co-operative Bulk Handling etc until around 1983.

Traditionally Commercial Caravans were built using 1" square tubing for the framework whereas the domestic caravans used ¾" steel tubing. Shape was very square and no colour bands were painted unless specified as in the case of W.A.G.R. who required a blue colour band painted on all of their caravans.

Quality Commercial Caravans were well sought after especially with the good name of Baravan.

In 1979/80 Baravan won a contract for the production of 47 caravans for the Main Roads Department.

This proved to be a great contract which Bruce and his wife Jenny managed from quotation to completion.

Bob Butcher was contracted (formerly of Blue Bird Caravans) to build and deliver the chassis's and Bruce's brother Brian to build and delivery the furniture.

The manufacturing process was slightly different from the traditional Baravan with the side frames made using a combination of steel channel and steel tube and then welded to the chassis (traditional Baravan Caravans used 19mm square tubular steel sides, fronts and rears with pressed steel channels to form the roof).

It proved to be an efficient way to build however the decline in commercial caravans was bought about in part by reduced expenditure by Government Departments and the use of relocatable structures such as Donga's and Transportable and Manufactured Buildings for purposes previously set aside for caravans.

The front and rear were of the same construction however were bolted and screwed to the chassis and side frames and the roof was made of steel welded then dropped on top of the side frames and bolted and screwed together. This was a similar method used by eastern states manufactures using aluminium for the framework.

CARAVAN SPARE PARTS

The spare parts business evolved around offering parts and components for the 'Home Builder' - Caravan Shells (completed exterior ready for internal fitout), chassis with framework plus all of the necessary parts to complete the build for the home handyman.

The longer the business continued replacement parts sales for existing caravans increased parts sales for the business. With retail sales of Baravan Caravans also came the need to provide accessories for their customers, growing as sale increased.

In 1978 Baravan were the state distributor for Viscount Caravans and also Millard when taken over by Viscount several years later. Along with this was the opportunity to supply parts for these brands and also the good relationship with Viscount opened doors to many of their suppliers so Baravan were able to deal direct with manufacturers of Eastern States parts suppliers to offer a much larger range at very good pricing.

The parts business continued to expand with Baravan under the names of 'Baravan of Welshpool' and 'Caravan Parts of WA' becoming the largest single supplier of Caravan Parts and Accessories in W.A. in the early 1980's.

Baravan Spare Parts 'Showroom' 1969

By 1984 Baravan had further developed the parts business to encroach on the area previously use for manufacturing at Welshpool into a very successful 'Wholesale/Retail business' supplying most caravan retailers with not only replacement parts and components but also a large range of accessories.

Quoted on our price list - 'If Baravan's haven't got, it's probably not available in W.A.'.

ADVERT 1984

ADVERT 1983

With declining caravan sale around 1988 David reassessed the income from the caravan business verses tenanted property and a decision was made to redevelop the original factory area into showroom warehouse. Part of this plan was the sale of 'Caravan Parts of WA' which would also create a tenant. The parts business was sold to Fleetwood who then moved all of their parts operations to Welshpool.

CEASATION OF DOMESTIC CARAVAN MANUFACTURING

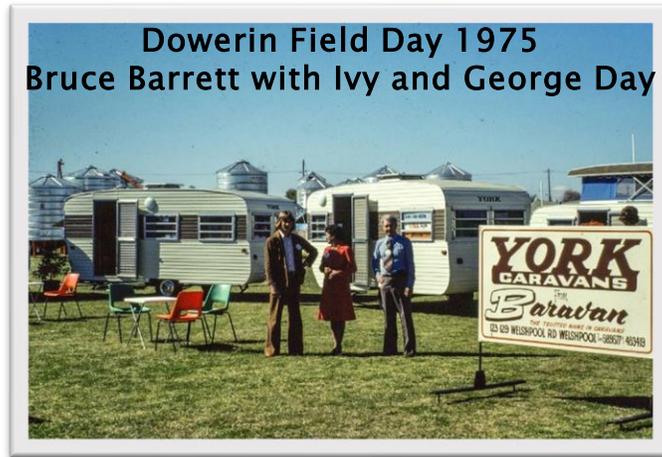

In the mid 1970's the Baravan Caravans were not as price competitive with many of the Eastern States brands of caravans being sold in Perth. David made the decision to stop producing Domestic Caravans and started importing a N.S.W. brand, York Caravans. York was made in the same factory as Millard and Starcraft.

A 15' x 8' wide Baravan was retailing for round \$3500 while a 15' x 7' wide York model was retailing for around \$2500.

Other manufacturer's representatives were selling brands in Perth such as Millard and Viscount from NSW, Chesney from QLD and many of the Victorian manufacturers at very competitive prices.

The York brand was sold between 1975 - 1977 by Baravan's. Changes were initiated by Fleetwood dropping the Viscount brand in favour of Millard.

Fleetwood were the largest retailer of caravans in W.A. with a Dealer Network including a Wholesale/Retail spare parts and accessories business so for Millard it was their choice to go with the largest retailer to increase their sales.

Appointed Western Australian distributors for Viscount

Not long after taking on the Viscount brand George Day (George Day Caravans, Cannington) and Peter Cameron (Cameron Caravans, Albany) were appointed as the first Baravan – Viscount dealers closely followed by another 9 Dealers making a total Dealer Network of 12 outlets from Esperance to Port Hedland.

The Dealerships operated under the banner of 'Baravan Viscount' as a '5 Star Baravan Dealer'. Sales blossomed and in the early 1980's over 500 new Viscount, Coleman and Millard Caravans in one year were transported to WA.

ADVERT 1984

The original owner of Viscount, John Carr sold his business around 1985/86. Unfortunately under the new ownership the business eventually ceased around 1991.

Baravan had already relinquished their ties with Viscount seeing a decline in caravan sales and had redeveloped all of the production and sales yard properties at Welshpool by 1990 into Showroom/Warehouses.

10ft. RESIDENTIAL CARAVANS

Around 1980 there was a change in the acceptance of the type of caravans suitable as use for permanent living in Australia. Caravans up to 36 ft long set up with annexes were used for people who chose the lifestyle offered when living in a caravan park. Acceptance was established for the use of semi movable caravans (not required to be licenced) to be used as permanent residence in caravan parks – the evolution of the 10 ft wide on-site caravan.

Baravan with their involvement with **Viscount Caravans** were initially transporting 10ft wide Onsite Caravans from Sydney to Perth. This proved to be a problem with travelling restrictions to daylight hours, permits required through some states and the wear and tear on the trucks transporting them. Costs were high and it limited the transport of traditional caravans to Perth.

With the decline in orders for Commercial Caravans in 1983, Baravan changed direction and manufactured the 10 ft wide units at the Welshpool factory. Baravan's first 10ft wide was an 18 ft, 6 berth model designed for caravan parks and then to a more traditional 28 ft x 10 ft model similar to those being produced in NSW.

Production of Baravan's under Viscount name

Viscount Caravans in NSW were happy for Baravan to go their own way with this product and offered assistance originally manufacturing in Perth under the Viscount and Millard brands as this helped to promote their products.

LOUNGE & DINING ROOM <ul style="list-style-type: none"> Fully carpeted Full height timber backed screens Colour adjustable TV screen (optional aerial) Plastic type ceiling tile 	BEDROOM <ul style="list-style-type: none"> Double bed with bedspread & inner lining mattress Large wall to wall wardrobe Plastic type ceiling tile Timber & vinyl flooring

THE AL Government Assisted Housing Unit Australia have now recognised that the large percentage of the population who reside in caravan parks or village sites are not being catered for.

This lifestyle is quickly becoming a fact of life for many people and the Government is now providing a service to meet this need. Legislation is being introduced to allow people to live in their own homes on village sites.

As a result of this need, and the excellent quality of many traditional units, the Baravan Group has developed a new range of residential units. These units are designed to meet the needs of the modern family and offer a complete, comfortable, immediately finished dwelling for less, in many cases, than the cost of land.

Viscount
DEALERS

See Caravan & Camping Page 12

These were distributed through the 'Baravan Viscount' network of Dealers in WA.

The Caravans were built either as a single wide, additional floor and annex or as double wide up to 35' long x 20' wide

Changes in the acceptance of these caravans eventually led to caravan parks being able to buy and locate manufactured housing as on-site accommodation and eventually the decline of the 10 ft wide caravan.

THE LAST BARAVAN

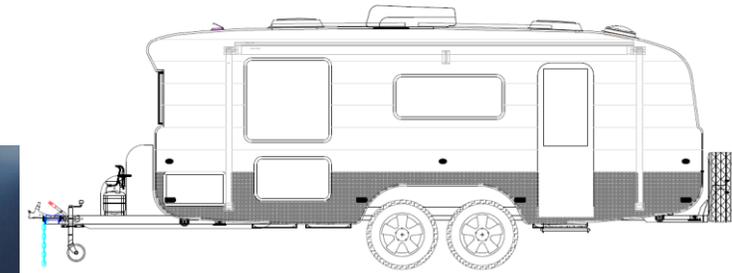

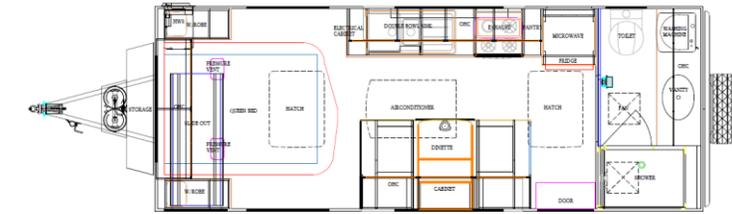

I retired a few years ago and whilst caravanning with my wife during 2019 in the south-west we discussed what we should do with our current caravan to last us another 10 years.

We thought it would be a great to own one of our family's Baravan's however none were built with ensuites and to convert an older caravan with all the features currently available in 2020 would be a huge task.

Problem solved, I reregistered the Baravan Caravan name and decided to build the last Baravan from scratch having started in October 2019.

Shape is based on a 1969 Baravan, and all steel construction

Size: 20ft x 8ft Body Tare: 2800 kg
2013 Landcruiser Wheels 18 x 8
Electric Brakes, Rocker Roller springs

Most of the work was carried out by myself however I was most grateful for some help from family: Jenny, Danielle, Adam and very good friends Austin and Jim. Thanks to neighbouring tenant's for a lift when I need it. LPG and electrical work carried out by licenced persons.

The caravan was built in a 6 mtr x 8 mtr unit in Myaree and took around 14 months to complete.
