## Bulletin

No 08 20<sup>th</sup> August 2018

Guest Speaker this week was Rio-Rita Lutui and Rose Roberts from NGARU POU a group dedicated to promote and nurture the Maori culture to children from 5 to 15 years, Rio also gave us a little taste of Maori music.

Rotary announced on August 15<sup>th</sup> that nearly US\$100 million in grants to support the global effort to end polio, a vaccine-preventable disease that once paralyzed hundreds of thousands of children each year. The announcement comes as Nigeria marks two years without any reported cases of wild poliovirus, following four reported cases in 2016.

To support polio eradication efforts in countries where polio remains endemic, Rotary is allocating the majority of the funds it announced today to Afghanistan (\$22.9 million), Pakistan (\$21.7 million), and Nigeria (\$16.1 million).

Rotary has committed to raising \$50 million a year to be matched 2-to-1 by the Bill & Melinda Gates Foundation, yielding \$450m for polio eradication activities over a three-year period. To date, Rotary has contributed more than \$1.8 billion to fight the disease.

### ***Engineer in Court***

At the trial, the engineer insisted that he had given the driver ample warning by waving his lantern back and forth for nearly a minute. He even stood and convincingly demonstrated how he'd done it.

The court believed his story, and the case was dismissed.

"Congratulations," the lawyer said to the engineer when it was over. "You did superbly under cross-examination."

"Thanks," he said, "but the plaintiff's lawyer sure had me worried."

"How's that?" the lawyer asked.

"I was afraid he was going to ask if the lantern was lit!"

### **What Gender is a Computer?**

A SPANISH Teacher was explaining to her class that in Spanish, unlike English, nouns are designated as either masculine or feminine.

"House" for instance, is feminine: "la casa."

"Pencil," however, is masculine: "el lapiz."

A student asked, "What gender is 'computer'?"

Instead of giving the answer, the teacher split the class into two groups, male and female, and asked them to decide for themselves whether "computer" should be a masculine or a feminine noun.

Each group was asked to give four reasons for its recommendation.

The men's group decided that "computer" should definitely be of the feminine gender ("la computadora"), because:

1. No one but their creator understands their internal logic;
2. The native language they use to communicate with other computers are incomprehensible to everyone else;
3. Even the smallest mistakes are stored in long term memory for possible later retrieval; and
4. As soon as you make a commitment to one, you find yourself spending half your pay cheque on accessories for it.

The women's group, however, concluded that computers should be Masculine ("el computador"), because:

1. In order to do anything with them, you have to turn them on;
2. They have a lot of data but still can't think for themselves;
3. They are supposed to help you solve problems, but half the time they ARE the problem; and
4. As soon as you commit to one, you realize that if you had waited a little longer, you could have gotten a better model.

Are the horizontal lines parallel or do they slope?

Man goes to the doctor, with a strawberry growing out of his head.  
Doc says "I'll give you some cream to put on it."

A guy walks into the psychiatrist wearing only Clingfilm for shorts.  
The shrink says, "Well, I can clearly see you're nuts."

Happiness is not the absence of problems  
but the ability to deal with them
