# Black Swallowtail

# **Black Swallowtail Caterpillar**

## Host Plant

After mating Black Swallowtails will lay their eggs on Parsley

The Caterpillars will feed on Queen Anne's lace, celery, parsley, carrots, dill, and parsnip.

## **Gray Hairstreak**

Lantana is  
Nectar and  
host plant

# Spring Azure

Coral Honeysuckle  
vine is the nectar and  
host plant.

# Monarch

---

# Gulf Fritillary

The host plant is  
Passion Vine

The caterpillar is  
orange and black

# Passion Flower Vine

Host to the Gulf  
Fritillary

A photograph of a Gulf Fritillary caterpillar on a tree branch. The caterpillar has a bright orange body with black spots and black spiky protrusions. It is positioned on a light-colored, textured branch. In the background, there are green leaves and a brown wooden fence. A semi-transparent white circle on the right side of the image contains the title and subtitle text.

Black and  
Orange

# Queen Butterfly

The Queen is similar to the Monarch but does not have the dark veins that a Monarch does.

**Certify your garden**

# Required to Certify

At least three different native caterpillar food plants must be grown, preferably more than one plant of each selected species

At least three different native butterfly nectar sources must be grown, preferably more than one plant of each selected species

The use of pesticides is discouraged.  
Pesticides can kill butterflies as well as other important pollinators.
