COVID-19 Confirmed and Probable Cases by Onset* Week

*When onset date is unavailable, specimen collection date, date of death, or date reported is used instead.

**Probable cases are antigen positive tests received since August 1, 2020.

January 19, 2021

Data through week ending 1/16/2021

Table 1. Confirmed COVID-19 Cases and Deaths

Summary of San Diego County Confirmed COVID-19 Cases and Deaths			
Confirmed cases	211,787	Deaths	2,103
Hospitalizations	7,399 (3%)	Underlying Conditions	1,979 (94%)
Illness onset date range*	2/14/2020-1/16/2021	Death date range	3/21/2020-1/15/2021
Median age	36 years	Median age	78 years
Age range	0-108 years	Age range	19-103 years
Male	101,531 (48%)	Male	1,214 (58%)
Female	108,938 (52%)	Female	889 (42%)
Healthcare workers	9,590 (5%)	Case Fatality Ratio	1.0%
Summary of Non-County Resident COVID-19 Cases			
Confirmed cases	15,384	Hospitalizations	775 (5%)

*When onset date is unavailable, specimen collection date, date of death, or date reported is used instead.

Note: percentage hospitalized and healthcare workers are calculated based on the total number of cases; information may be unknown in some cases. Hospitalization counts are likely underreported and may increase as additional information is obtained.

Confirmed COVID-19 Cases by Geography

Figure 10. Cumulative COVID-19 Rates by Zip Code of Residence, San Diego County (Countywide Rate = 6,319 per 100,000 Population)

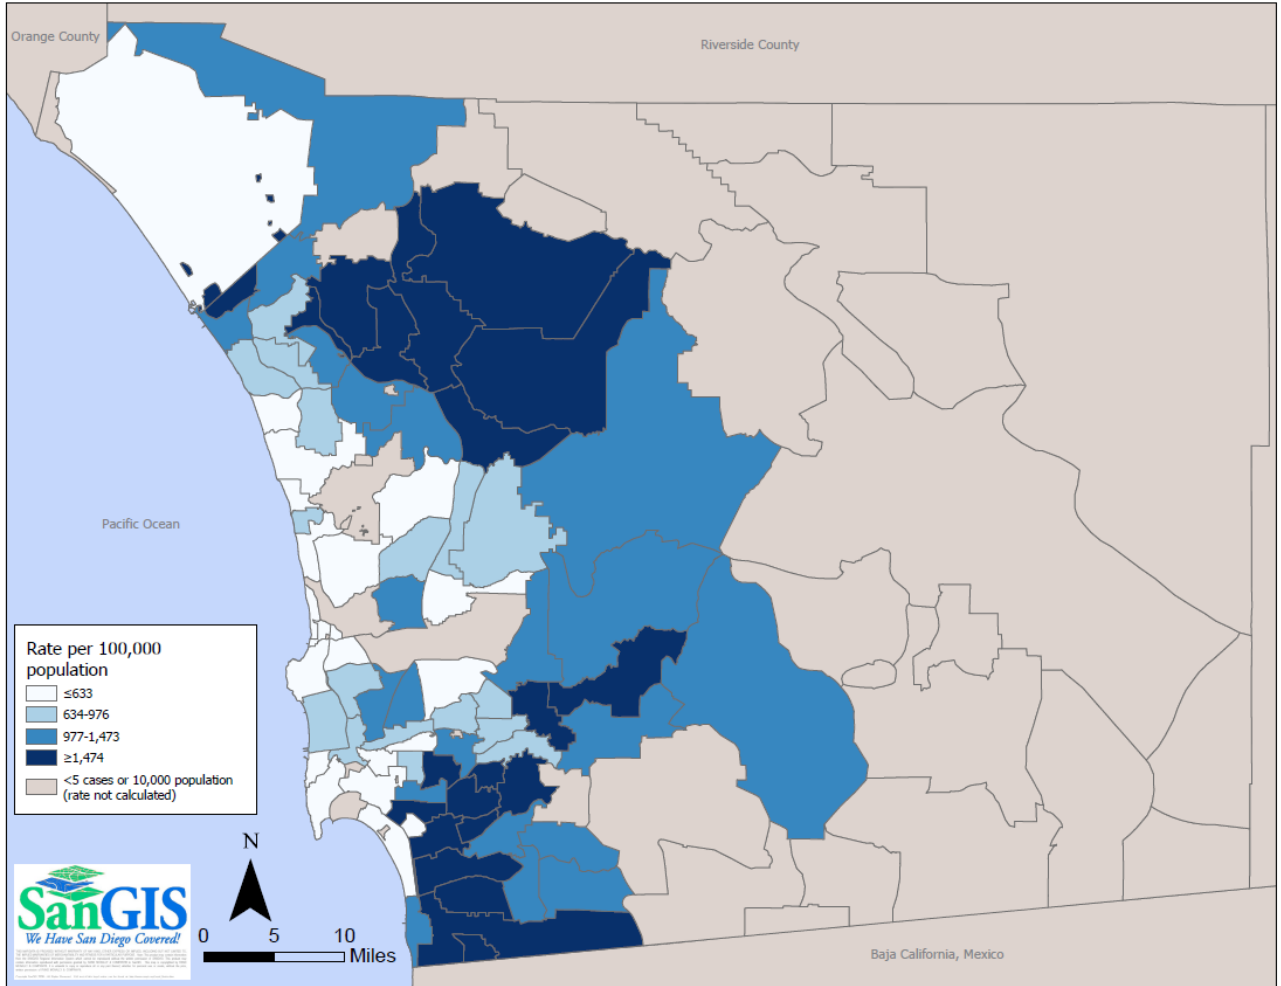

Rates calculated using 2019 population estimates from the San Diego Association of Governments. Rates not calculated for counts under 5 cases or populations less than 10,000. Zip code is zip code of residence, which may not be location of exposure. Case [counts and rates](#) for each zip code are updated routinely on the County of San Diego COVID-19 website.

COVID-19 Potential Exposure Settings

Table 2. COVID-19 Potential Exposure Settings, San Diego County Residents

Confirmed COVID-19 Case Summary		Last 2 Weeks (1/3 – 1/16)		Cumulative (6/5 – 1/16)	
Total Positive Cases		43,864		203,541	
Number Interviewed		11,068		92,479	
Selected Exposures among those with Completed Interviews		Count	%	Count	%
Potential Community Exposure Settings^a					
At least one potential community exposure setting ^b		4,297	38.8%	41,671	45.1%
Bars and Restaurants		398	3.6%	6,988	7.6%
Casinos		74	0.7%	764	0.8%
Group Gatherings		327	3.0%	2,426	2.6%
Gyms		24	0.2%	395	0.4%
Hair Salons or Barbers		56	0.5%	1,793	1.9%
Places of Worship		188	1.7%	1,836	2.0%
Protests		0	0.0%	47	0.1%
Retail locations		1,230	11.1%	9,078	9.8%
Workplaces ^c		3,114	28.1%	29,997	32.4%
No potential community exposure setting reported		6,771	61.2%	50,808	54.9%
Average number of community settings visited		1.4		1.5	
Range of community settings visited		1-13		1-24	
Household Exposures^d		4,310	38.9%	33,194	35.9%
Any On-site Education-related Exposures					
Childcare/Preschools		73	0.7%	786	0.8%
K-12 schools		92	0.8%	1,733	1.9%
Colleges/Universities		44	0.4%	826	0.9%
Any Travel-related Exposures					
Travel within the United States		944	8.5%	8,339	9.0%
Travel to Mexico		444	4.0%	5,156	5.6%
Travel to Another International Location		15	0.1%	127	0.1%

^a Potential community exposure settings are defined as indoor or outdoor locations in which cases came within 6 feet of anyone who was not a household member for at least 15 minutes during the 2-14 days prior to symptom onset, even if the case wore a mask or facial covering. Potential exposure settings are places case-patients visited during their exposure period, not confirmed sources of infection. Persons may have visited more than one location.

^b Effective 11/24/2020, travel exposures are excluded from community exposure settings.

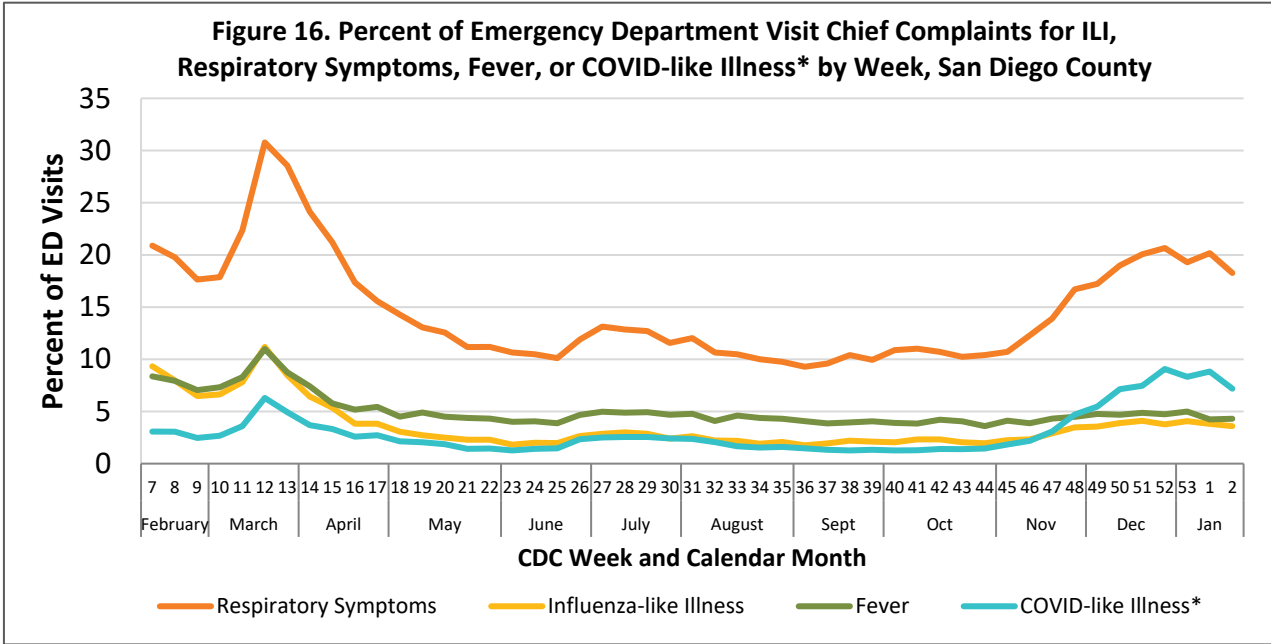

^c Workplaces may include other community settings (e.g., bar/restaurant, hair salon, retail).

^d Persons with household exposures reported having close contact with someone in their household with laboratory-confirmed COVID-19, though this was not independently verified. Household exposures may have occurred outside the 2-14 days prior to symptom onset.

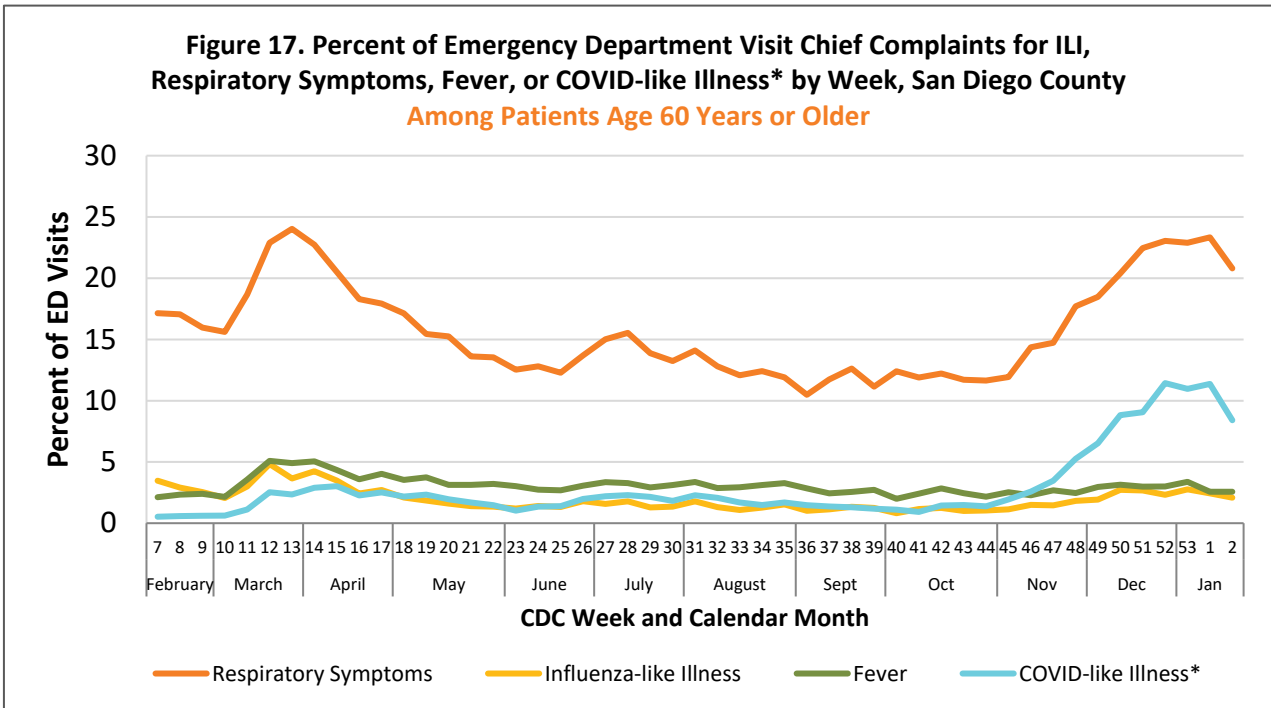

January 19, 2021

Data through week ending 1/16/2021

Emergency Department Data

Categories are not mutually exclusive. *COVID-like Illness includes fever and cough, shortness of breath, or difficulty breathing OR coronavirus diagnostic codes.

Categories are not mutually exclusive. *COVID-like Illness includes fever and cough, shortness of breath, or difficulty breathing OR coronavirus diagnostic codes.

Epidemiology and Immunization Services Branch

January 19, 2021

Data through week ending 1/16/2021

COVID-19 Laboratory Test Positivity Rate

Includes PCR tests performed by COSD Public Health, hospital, and reference laboratories and reported via Electronic Laboratory Reporting (ELR) and line lists. Excludes invalid, indeterminate, and unsatisfactory results.

COVID-19 Vaccinations

*Totals are vaccines administered, not individuals vaccinated, and only include vaccines that have been recorded in the San Diego Immunization Registry (SDIR). Some healthcare providers, including Veteran's Affairs, the Department of Defense, some tribal entities, and prisons do not report to SDIR.

January 19, 2021

Data through week ending 1/16/2021

COVID-19 Watch Data Sources

The following sources of data are used to produce this report:

- **COVID-19 case reports:** Medical providers and laboratories report individual cases of PCR-confirmed COVID-19 via fax or electronic laboratory reporting (ELR) to the County of San Diego Epidemiology Unit.
- **COVID-19 deaths:** The County of San Diego requests that all deaths related to COVID-19 be reported for surveillance purposes. Medical facilities may report these deaths directly to the Epidemiology Unit or they may be identified by the Office of Vital Records through death certificate registration. The Epidemiology Unit compiles the data, and only reports deaths that can be verified by a death certificate.
- **Emergency Department Chief Complaint Data:** Electronic emergency department data are reported to the Epidemiology Unit daily. The number of respiratory chief complaints and the number of total emergency department visits are used to calculate percentages for all respiratory-related visits and visits specific to influenza-like illness, fever, and COVID.
- **COVID-19 outbreaks:**
 - Skilled Nursing Facilities: at least one case of laboratory-confirmed COVID-19 in a resident.
 - Non-SNF Institution/Congregate Settings: at least one case of laboratory-confirmed COVID-19 in the setting of ≥ 2 cases of acute illness compatible with COVID-19 in residents or staff members of residential congregate settings with onset within a 14-day period.
 - Community settings: three or more laboratory-confirmed COVID-19 cases in different households in a cluster of 2 or more acute illnesses compatible with COVID-19** with onset within a 14-day period.
- **COVID-19 vaccinations:** Number of vaccinations registered in the San Diego Immunization Registry (SDIR) by participating providers. Some providers, including the VA, DoD, other military, some tribal, and prisons do not report to SDIR.
- **SANDAG population estimates, vintage 2019:** Rates are calculated using 2019 population estimates from the San Diego Association of Governments. Rates are not calculated for counts under five cases.

The purpose of the weekly **COVID-19 Watch** is to summarize current COVID-19 surveillance in San Diego County.

Data are preliminary and may change due to delayed reporting and additional information obtained during investigations.
