

Mt. Clemens Rotary Water Projects

Mt.Clemens Rotary, as one of their projects, is working on supplying Bio-Sand water filters and new water wells to parts of Africa. They will complete two wells; one in Moribabougou and another in the village of Kojnini. They will continue on their path to supply water filters to this whole region.

Next, they will be in the Republic of South Africa in the Township of Esikhawini where they will drill one well and introduce the BioSand filters to the people. For more informatiOn contact John Walendowski at jwalen02@comcast.net
