

Rotaract Club of Maputo

The Maputo Rotaract Club carried out the Massaca Stop COVID 19 Project as part of the preventive measures against the pandemic. The project consisted in donation of preventive adapted and sustainable material against COVID19 to the Massaca II Health Center located in Maputo Province. Member contributions enabled the Rotaractors to offer 5 buckets with taps for hand washing, 3 soap boxes and 20 washable and reusable cloth face masks.

The Rotaract Club also held a National Oratory Award project which aims to involve young people in a learning cycle and challenge them to communicate ideas and develop arguments. This first edition was held in four stages from August to November 2020 and 24 participants were selected. The club partnered with a Toastmasters Club that collaborated on the technical component, with sharing relevant content, held online-workshops to clarify doubts opened to participants and the public, and led the evaluation process. In addition, they had three support institutions that helped to award the three best young public speakers. Due to the limitation by COVID-19, only young people from Maputo and surrounding areas were reached, but it is hoped that the next editions to reach the whole country.
