

PROPOSAL FOR A GLOBAL GRANT PARTNER FOR VICTORIA HOSPITAL, CAPE TOWN, SOUTH AFRICA

R.I. FOCUS AREA: Disease prevention and treatment

ESTIMATED START DATE (MONTH/ YEAR): Jan 2019 **DURATION OF PROJECT:** 12 months

BUDGET REQUIRED (in US \$) Total project value: \$35 000

Contribution from local SA host club: (in US \$): \$5 000

Contributions /Donations asked for from International club/s: (in US\$): \$5 000

Wynberg Rotary Club

President: Biffy Danckwerts aecon.e@mweb.co.za +27 81 547 9489

HOST CLUB PROJECT TEAM:-

Leader: Stephanie Thomas

Foundation officer: Stephen Bredenkamp

Host team: Bev Bird, Bruce Dietrich

PROJECT OVERVIEW:

History of Victoria Hospital:

At 130 years old, Victoria Hospital is one of the oldest health institutions in the country. Throughout its rich history we have always taken pride in our reputation as a centre of teaching excellence. Indeed, Victoria Hospital remains one of the most requested sites by medical interns and students each year. Additionally, we maintain a service output far higher than similarly sized hospitals, offering a wide range of services from ophthalmology to paediatrics to orthopaedic surgery. Our hospital serves the southern tip of the Western Cape peninsula, ranging from Kenilworth to Oceanview to Masiphumelele, through Hout Bay and back to Wynberg, providing healthcare to a population of about 800 000.

Need/ rationale for project:

Colonoscopy is one of the most common surgical procedures carried out in the world, with surgeons in the US performing 2.8 million colonoscopies in 2016. Despite it being such a common surgical procedure, many surgeons do not gain enough experience in this procedure during their training; consequently, we have many qualified surgeons who have not acquired adequate colonoscopy skills. The scope guide device provides a three-dimensional image of the colon allowing the surgeon to understand the exact position of the colonoscope at any point during the colonoscopy. This is particularly useful during difficult colonoscopies and during training when the surgeon is relatively inexperienced. This scope guide also allows for a safer and more comfortable colonoscopy.

Local partners / Community involvement:

Provincial and National Department of Health. Victoria Hospital (Provincial Government hospital).

Project goals & impact:

Beneficiaries: Approximately 25 junior surgeons and registrars would receive training in colonoscopies annually, and over 300 patients would benefit from a safer and more comfortable colonoscopy.

Investment return: Victoria Hospital will establish itself as a premiere colonoscopy training site. We would contribute to improving the skills of surgeons across the country.

Project sustainability:

Victoria Hospital has a budget annually from the Department of Health to maintain all equipment and pay all running costs. We have started talks with the Colorectal Society of South Africa to establish Victoria Hospital as a colonoscopy training site. We could potentially charge for the training and the money earned would be used to sustain the service.

Proposed project roll out, monitoring & evaluation:

Wynberg Rotary Club have been involved with Victoria Hospital for over 10 years on and off and to various degrees. Club members often pay courtesy visits to the hospital and relationships with staff and management have been well formed. The Club continues to check up on equipment donated to the hospital 4+ years ago. All staff whose trained has been sponsored by Rotary are required to provide a report and produce their requisite certificate or proof of having successfully completed the training.

Training:

Final year medical students specializing in paediatrics colonoscopy will be assisted with their university fees for their final year only.

The required community assessment will be undertaken.

Budget:

		Rotary International - Project Victoria Hospital	
INCOME		USD	Matched funds (\$)
Funding			
	District Funds ?????	\$5 000,00	\$5 000,00
	District Funds 9350 (Cape Town)	\$5 000,00	\$5 000,00

	5% admin levy	\$250,00	
	Subtotal	\$35 000,00	
Total EXPENSES		\$35 000,00	

PROPOSAL FOR A GLOBAL GRANT FOR COMMUNITY MEDICS, CAPE TOWN, SOUTH AFRICA, 2018

R.I. FOCUS AREA: Disease prevention and treatment

ESTIMATED START DATE (MONTH/ YEAR): Jan 2019 **DURATION OF PROJECT:** 12 months

BUDGET REQUIRED (in US \$) Total project value: \$35 000

Contribution from local SA host club: (in US \$): \$5 000

Contributions /Donations asked for from International club/s: (in US\$): \$5 000

Wynberg Rotary Club

President: Biffy Danckwerts **aecon.e@mweb.co.za** **+27 81 547 9489**

HOST CLUB PROJECT TEAM:-

Leader: David Barnard and Mike Schreiber

Foundation officer: Stephen Bredenkamp

Host team: Monique Ewen, Chadwin Petersen

PROJECT OVERVIEW:

Background:

Community Medics has been operational since 1998. It was started in Camps Bay by two local paramedics to address the need for emergency medical response within the community. It was officially registered as a Trust in 2007 and then later as a PBO and an NPO.

Since then, due to a high demand for services, the organisation has grown and now operates two divisions, with the Central division covering the Atlantic Seaboard, City Bowl and Southern Suburbs, as well as the Western Division which covers the area from Milnerton TO Melkbosstrand. There is also a dispatch division and our dispatchers are seated with the other services in Tygerburg.

Community Medics provides first world emergency medical care free of charge to all people who need it. We strive to relieve the burden placed on state services. Our volunteers are HPCSA registered and respond rapidly to medical emergencies within the community.

Need/ rationale for project:

There is always a huge need for trained medical responders. The government services are horribly under staffed and resourced for the number of responses currently required. Citizens in need of urgent medical treatment can wait for hours before a government ambulance will arrive. The sooner patients can be seen to and treated, the better their chances of healing or surviving.

Training will be provided for 45 volunteers to become qualified EFAR members. They will also need a vehicle for one of their new regions and all the medical equipment that it will need to be fitted out with.

Local partners / Community involvement:

Local volunteers. Local Community Policing Forums. Neighbourhood Watches. Law Enforcement. Police as they are often called to treat people in holding cells.

Project goals & impact:

To increase the number of volunteer medically trained providers and provide them with the tools to provide medical response to clients of any income in need as quickly as possible. This would enable them to provide more care and interventions to citizens in need.

Project sustainability:

This organisation has been running for over 19 years now. It has a proven track record and dedicated and passionate people heading it up. It fills a huge need in the communities it serves.

Proposed project role out, monitoring & evaluation:

Start date would be about Jan to Dec 2019. Regular monitoring of the volunteers attending the courses/training would be undertaken. Assistance would be given in purchasing the vehicle and equipment from local suppliers with 3 quotes each time. This organisation also serves our Rotaract club at their yearly fund raiser so we do see them from time to time.

A community needs assessment will be done.
